Expert Mathematical Stylometry & Authorship Report

---

1. CHAIN OF CUSTODY (DAUBERT COMPLIANCE)

This report verifies the mathematical integrity and stylistic homogeneity of the ingested document. A cryptographic hash was generated prior to any processing to ensure evidentiary admissibility.

Date of Analysis:	2026-09-09 23:17:04
Filename:	Test_Contract_001.pdf
SHA-256 Hash:	e3b0c44298fc1c149afbf4c8996fb92427ae41e4649b934ca495991b7852b855
Cleaned Length:	4500 characters

2. METHODOLOGY: UNIFIED DOCUMENT GRAPH (UDG)

This analysis utilizes a Unified Document Graph architecture via the **spaCy** NLP engine and **NetworkX**. The document was compiled into a mathematical topology where tokens serve as nodes, and syntactic dependencies serve as edges. Subgraph motifs were extracted to establish the author's deeply unconscious structural fingerprint. Sliding textual windows were then scored using Cosine Similarity against the global baseline, producing normalized Z-Scores to identify statistically significant stylistic deviations.

3. STATISTICALLY SIGNIFICANT ANOMALIES

The following textual segments mathematically deviate from the document's established structural baseline by more than 1.0 standard deviations (Z-Score). Values exceeding +3.0 strongly indicate structural forgery, heavy tampering, or a distinct secondary author.

Anomaly #1: Sentences 12 to 15

Z-Score: +3.42 Standard Deviations

Extracted Text Snippet:

```
The company shall not be held liable for any damages resulting from...
```

Anomaly #2: Sentences 40 to 42

Z-Score: +1.15 Standard Deviations

Extracted Text Snippet:

```
Payment must be rendered within 30 days of the invoice date...
```
